University of Central Florida

Project Five

- **Title:** “Project Five: Managing The `savn.local` Domain”
- **Points:** 100 points
- **Due Date:** **Sunday April 17, 2022** by 11:59 pm WebCourses time.
- **Objectives:** The completion of Project Four left you with a completely configured `savn.local` network. With this project we now begin some basic system administration activities on the network. This project will focus on MJL-SP22-S22-1 and MJL-SP22-S22-2.
- **Deliverables:** Seven screen shots as shown on pages 8, 22, 29, 33, 36, 38, and 41.

Project Five – Background

- You may recall from our earlier discussions of domains/trees/forests that an organizational unit (OU) offers a way to achieve more flexibility in managing the resources associated with a business unit, department, or division than is possible through domain administration alone.
- An OU is a grouping of related objects within a domain, similar to the idea of having sub-directories within a directory.
- OUs are typically used to reflect the structure of the organization without having to completely restructure the domains with the that structure changes.
- OUs allow the grouping of objects so that they can be administered using the same group policies, such as security.

Project Five – Background

- The first step in Project Five will be to create some basic OUs for our `savn.local` domain.
- We'll consider our organization to be made up of three basic units: `administration`, `research`, and `sales`.
- The next couple of pages step you through setting up these three OUs.

The pages that follow explain the details of the project, stepping you through the actions. In the various callouts, the items that appear in **bold green** text require you to do screen captures and/or answer questions. These screen captures and answers will constitute your submission for this project. **Be sure that the name of the VM is clearly visible in each screen shot.**

Project Five – Creating OUs

- Start MJL-SP22-S22-1 (the domain controller for `savn.local`) domain.
- Click on Tools in the top right side of the Server Manager window.
- Select Active Director Users and Computers.
- Right-click the `savn.local` link in the left pane.
- Point to New and select Organizational Unit. (see page 6)
- When the new window appears, enter the name: `Administration`. (see page 7)
- Repeat these steps for: `Research` and `Sales`.
- After completing this task, get a screen shot of the Active Directory Users and Computers window showing the three new OUs, like page 8.

Project Five – User Account Management

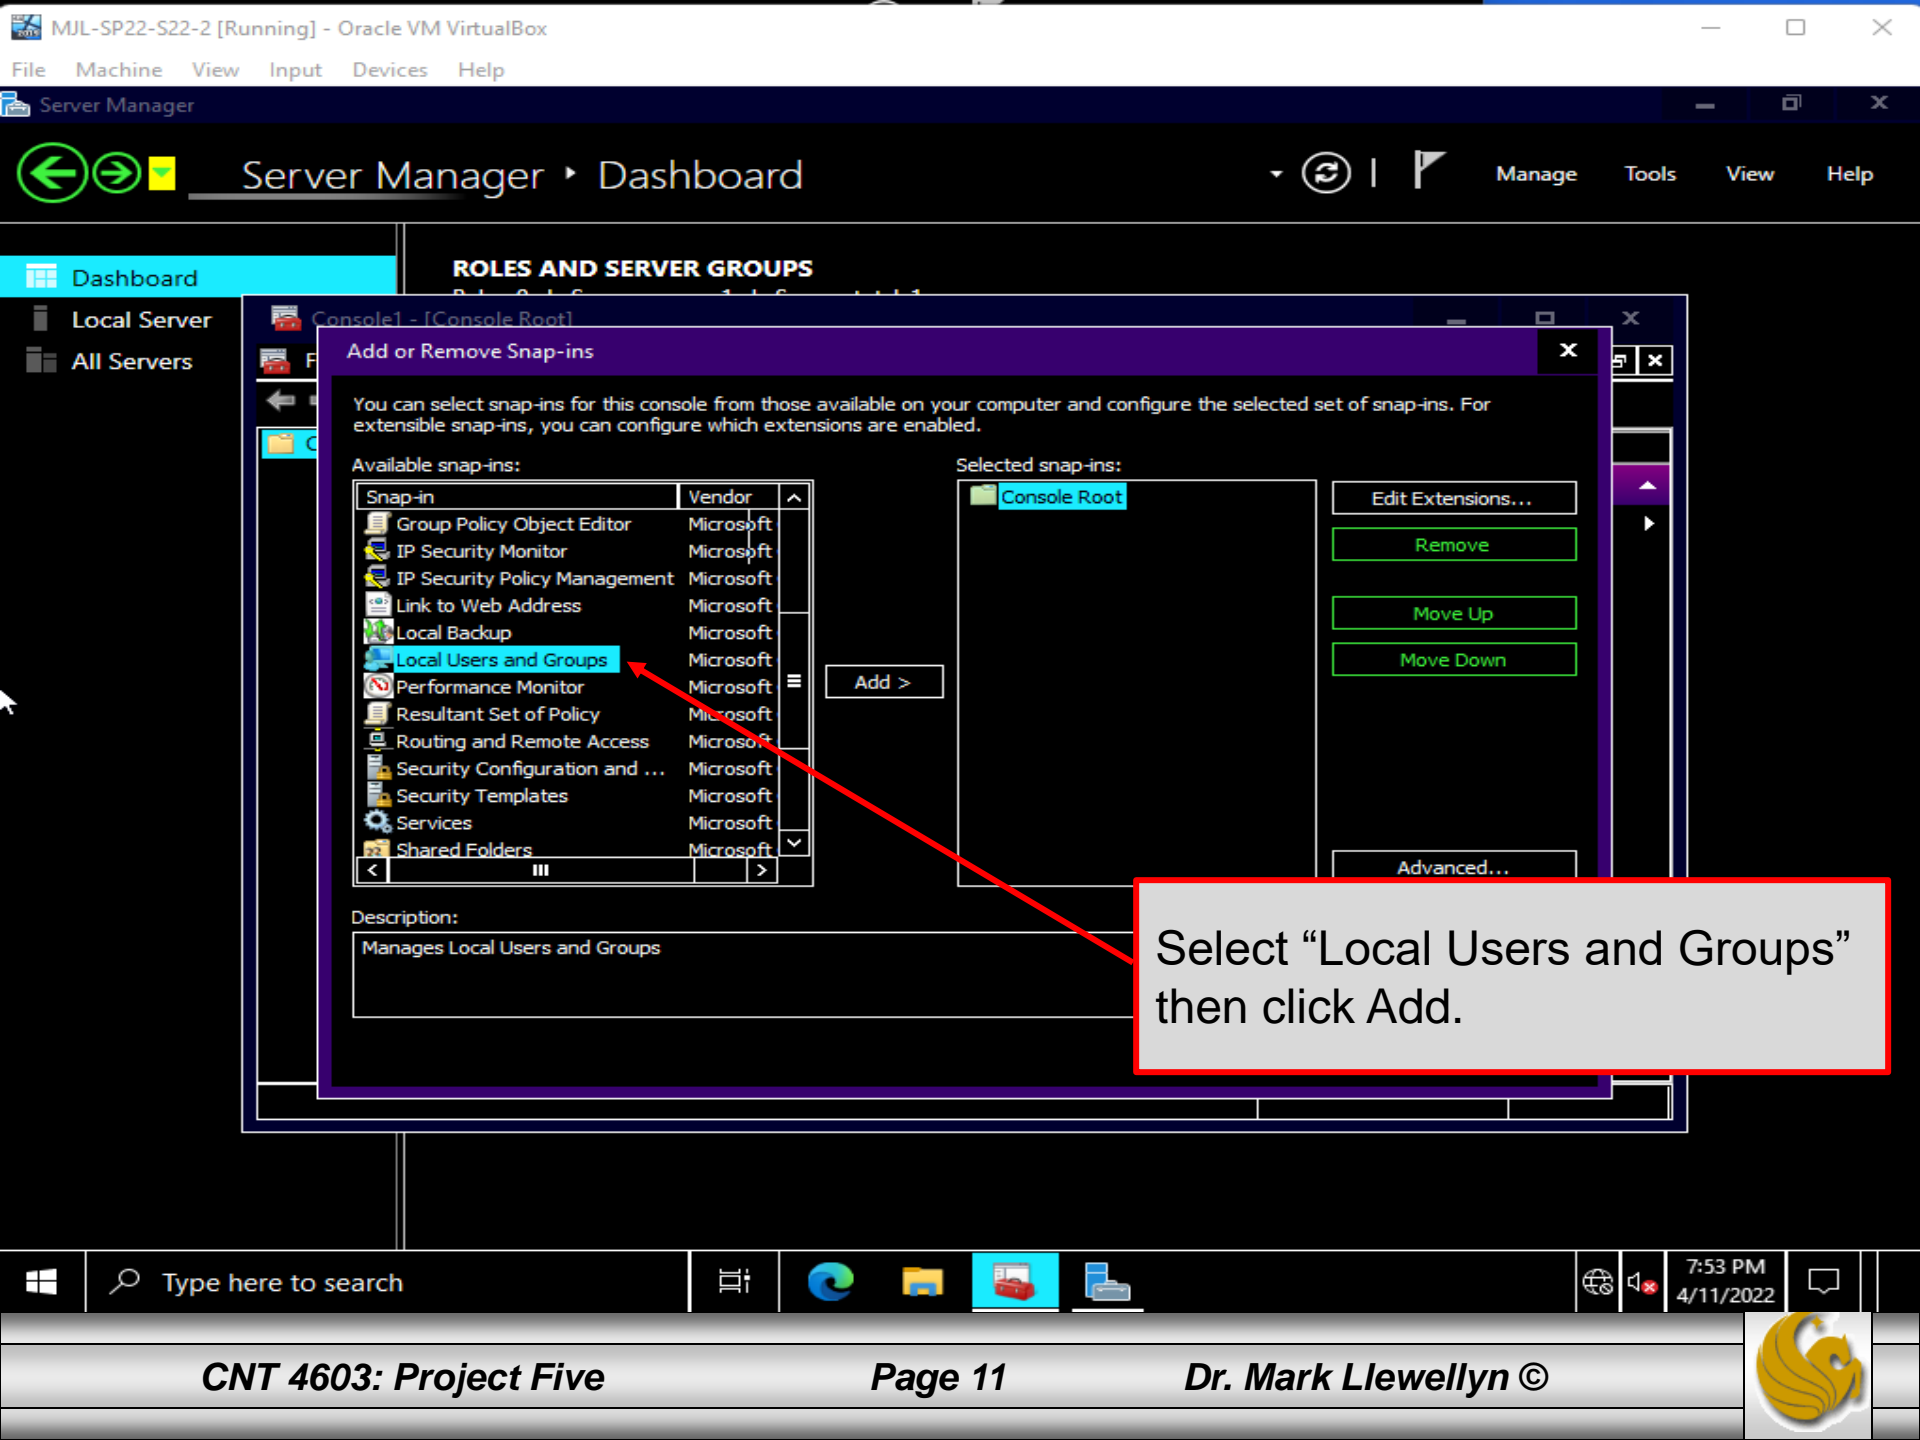

- We'll use the OUs you just created a bit later (and also in subsequent projects), but the next thing that I want to give you some experience handling is the creation and manipulation of user accounts on the servers.
- While MJL-SP22-S22-2 is a member of the `savn.local` domain it is also a stand-alone server (in that it is not a domain controller). Hence, on MJL-SP22-S22-2 we can create a local, non-domain-oriented account. We'll do this first, before we create any domain-oriented accounts from inside AD on MJL-SP22-S22-1.

Generating a Local User Account on MJL-SP22-S22-2

- On a server where AD is not installed, new user accounts are created by first installing the Local Users and Groups MMC (Microsoft Management Console) snap-in for standalone servers.
- The steps for doing this are:
 - Start MJL-SP22-S22-2 running.
 - Right click the Windows icon in the lower left of the window. Select Run, enter mmc at the prompt, and click OK.
 - Click the File menu option, and click Add/Remove Snap
 - Under Available snap-ins, find and click Local Users and Groups. See next page for a screen shot of this.

the user must change this
password at the next login. You
will need to do this.

Generating a Local User Account on MJL-SP22-S22-2

- When you complete this task, save the changes when prompted and you will have successfully created a local user account on MJL-SP22-S22-2.
- Note that `localuser01` is not a domain user and is known only locally to MJL-SP22-S22-2.
- From the Control Panel in MJL-SP22-S22-2, select the User Accounts option as shown on the next page.

Generating a Domain User Account on MJL-SP22-S22-1

- Management and access to resources through Active Directory begins through user accounts. On a server where AD is installed, new user accounts are created via the Active Directory Users and Computers tool, which became accessible on MJL-SP22-S22-1 when it became the domain controller for the `savn.local` domain. It is accessible from Administrative Tools.
- To create a user in the `savn.local` domain the steps are:
 - Start MJL-SP22-S22-1 running.
 - Click Administrative Tools, Select Active Directory Users and Computers from the list.
 - In the left pane, click the plus sign in front of the `savn.local` domain entry (it may already be expanded depending on what you've done here previously).

Name	Type	Description
Anna-Maria J. Mazarelli	User	COO

After moving the user's account, Select "Administration", you should see the account listed here and no longer under "Users"

Take a screenshot of this page. Label it: "SS4 - domainUser01 account located in Administration OU."

MJL-SP22-S22-1	12	Warning	Microsoft-Windows-Time-Service	System	4/11/2022 7:32:43 PM
MJL-SP22-S22-1	10154	Warning	Microsoft-Windows-Windows Remote Management	System	4/11/2022 7:32:15 PM

Other user

MJL-SP22-S22-2\localUser01

.....

Sign in to: MJL-SP22-S22-2

How do I sign in to another domain?

Type domain name\domain user name to sign in to another domain.

Type MJL-SP22-S22-2\local user name to sign in to this PC only (not a domain).

Administrator

Other user

Sign out of MJL-SP22-S22-2 and resign in as the localuser01. This will require resetting the password. Note that you need to sign in to the local computer and not to the savn.local domain.

Don't login as the Administrator. Click the "Other User" link in the bottom left corner of the screen.

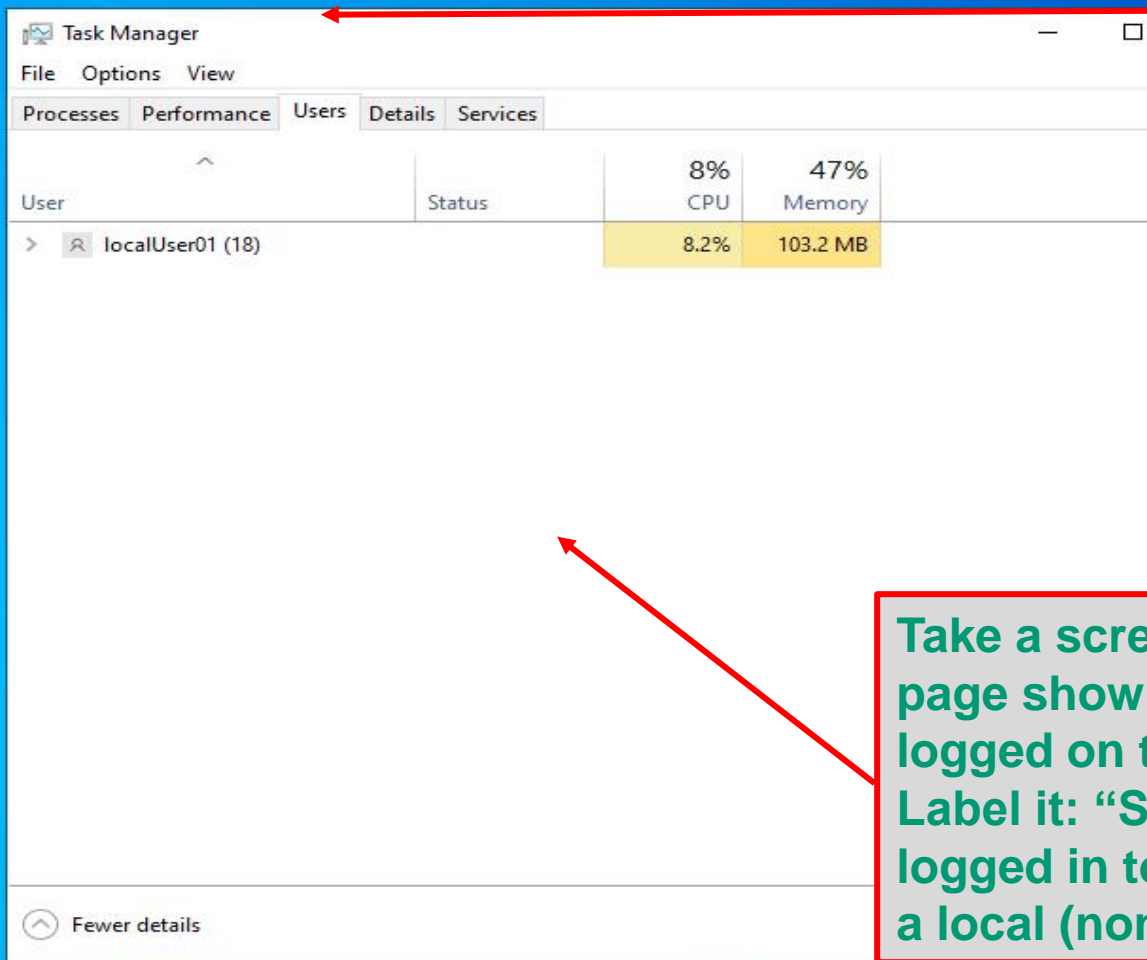

Other user

The user's password must be changed before signing in.

Now change the password
for localUser01.

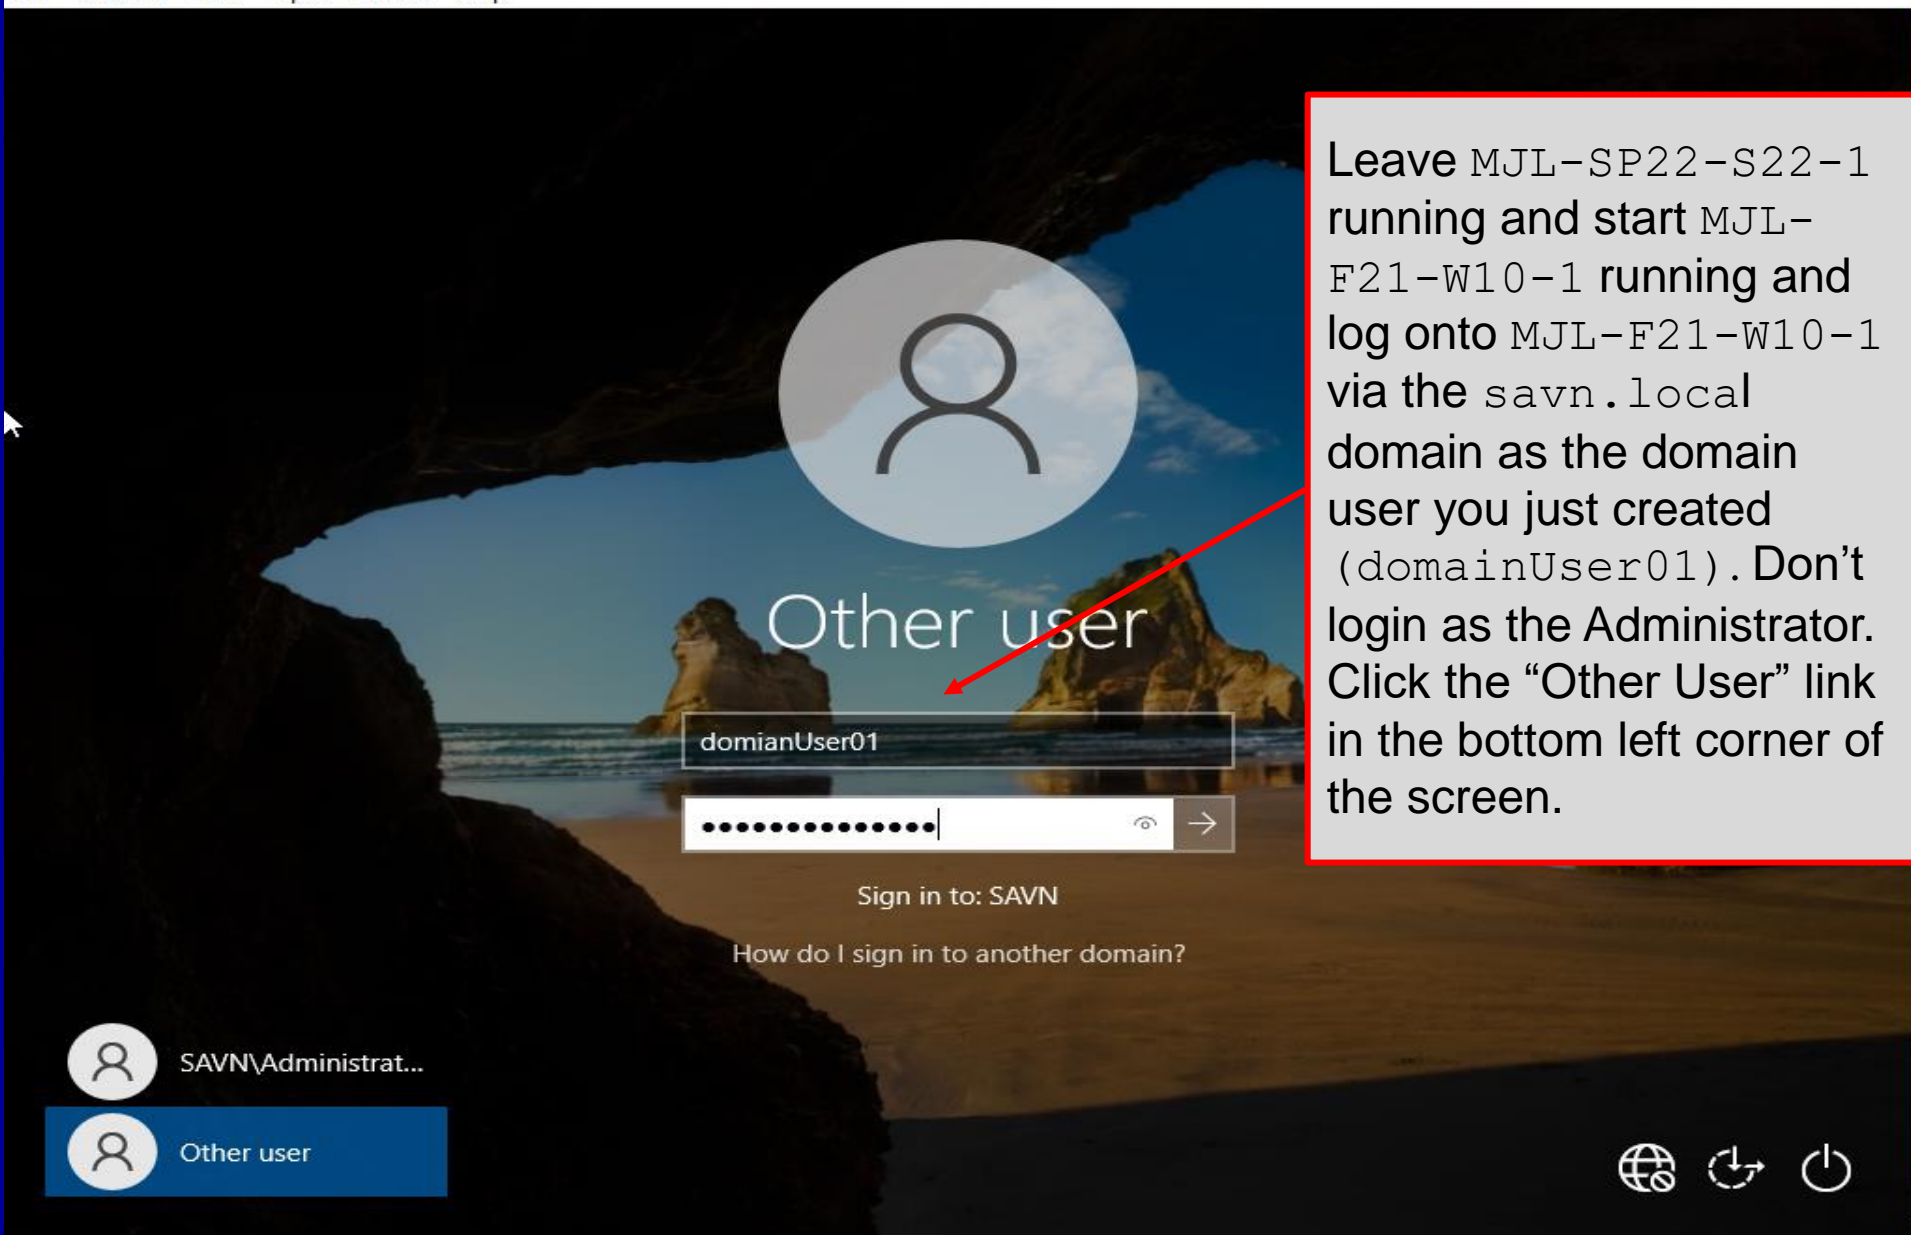

Open the Task manager (right click on an open area of the tool bar). Select "More Details". Select "Users" tab. Note that localuser01 is not an administrator, hence there is no Server Manager tool running.

Take a screen capture of this page showing localuser01 is logged on to MJL-SP22-S22-2. Label it: "SS5 – localUser01 is logged in to MJL-SP22-S22-2 as a local (non-domain) user."

Type here to search

8:41 PM
4/11/2022

Leave MJL-SP22-S22-1 running and start MJL-F21-W10-1 running and log onto MJL-F21-W10-1 via the `savn.local` domain as the domain user you just created (`domainUser01`). Don't login as the Administrator. Click the "Other User" link in the bottom left corner of the screen.

Task Manager

File Options View

Processes Performance App history Startup Users Details Services

User	Status	84% CPU	57% Memory	0% Disk	N
> domainUser01 (16)		0%	0 MB	0 MB/s	0 Mbps

^ Fewer details

Open the Task manager (right click on an open area of the tool bar). Select "More Details". Select "Users" tab.

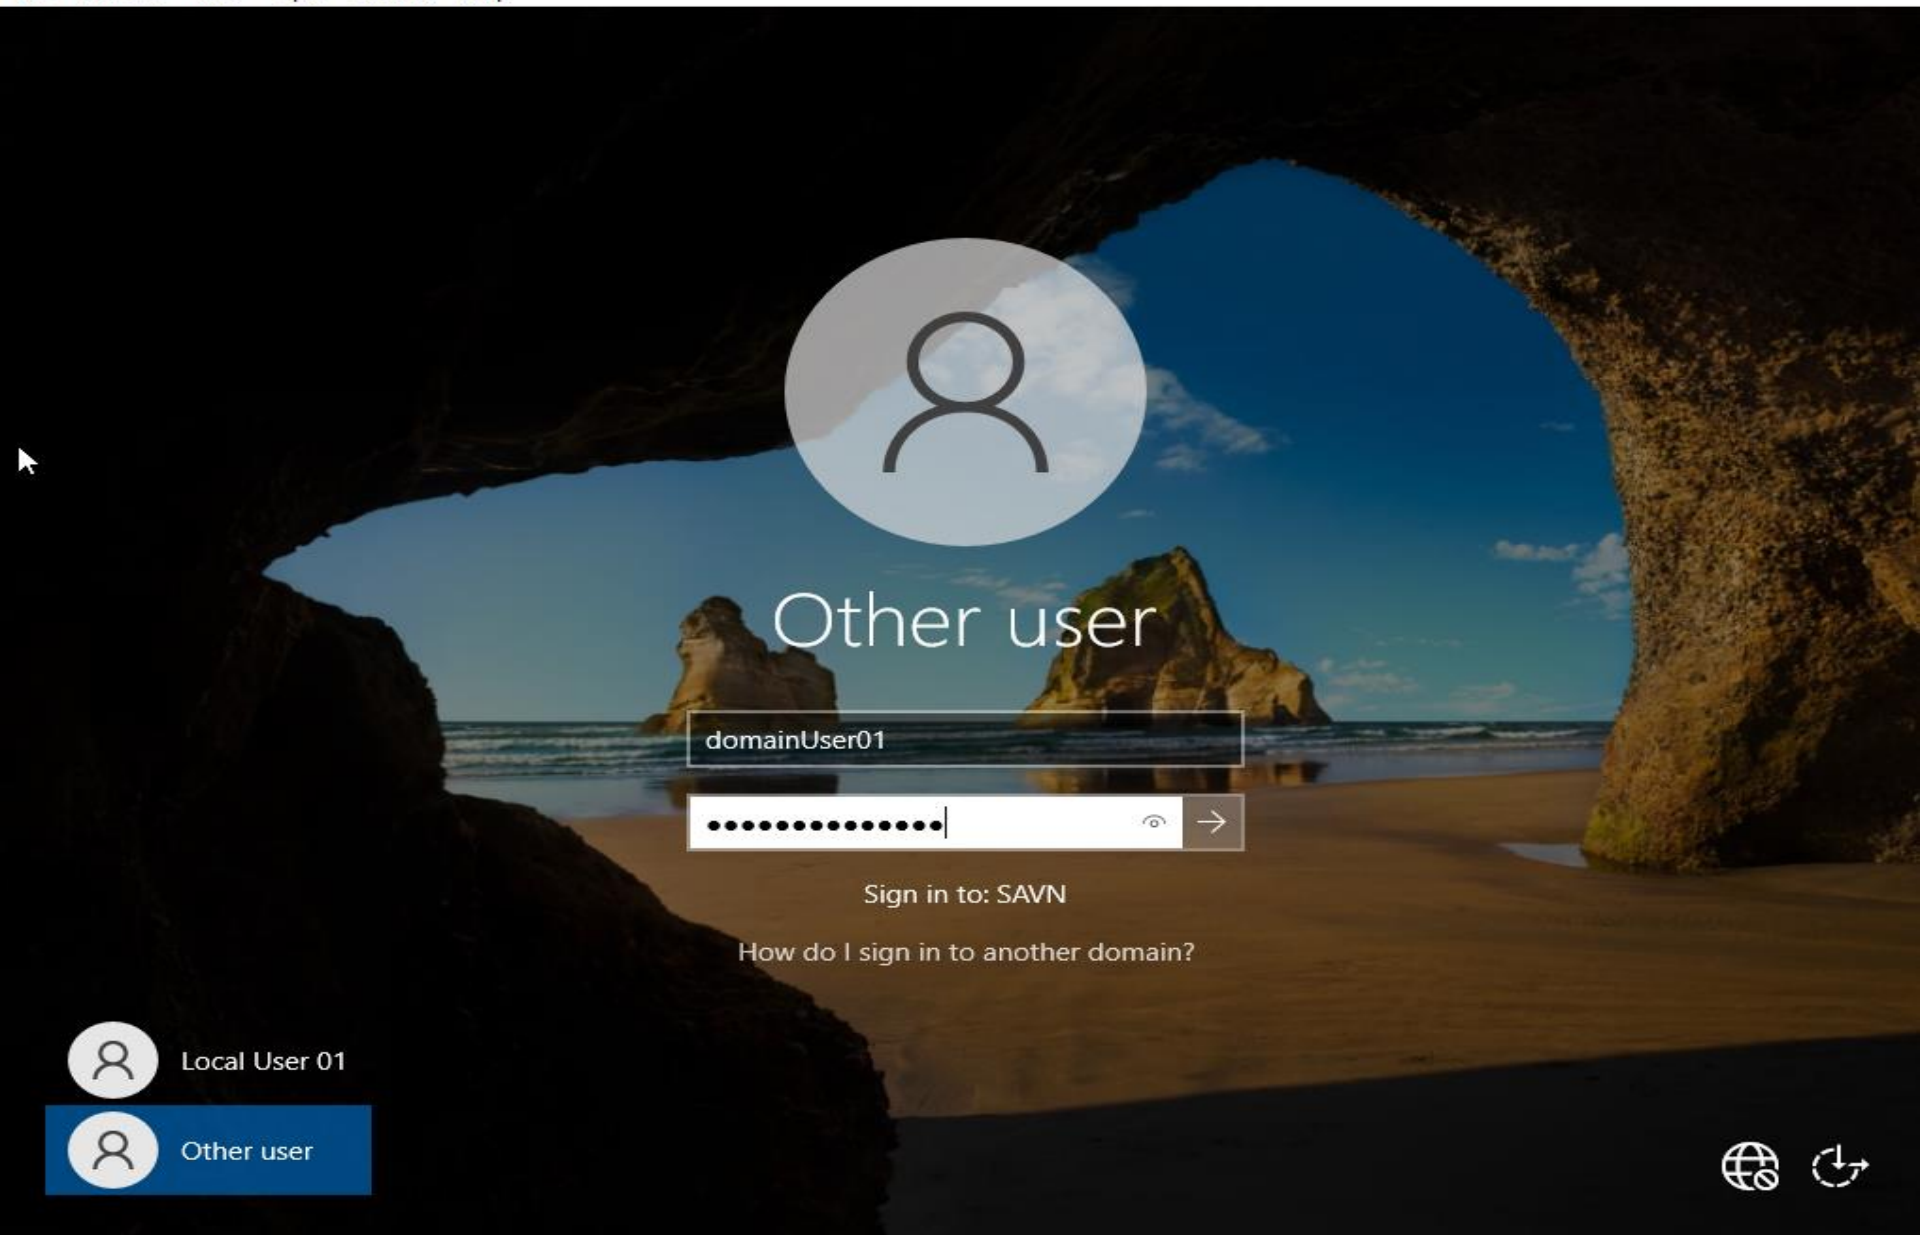

Then do a screen capture of this page, showing domainUser01 is logged on to MJL-SP22-S22-W10-1. Label it: "SS6 – Domain user logged into a system in the domain."

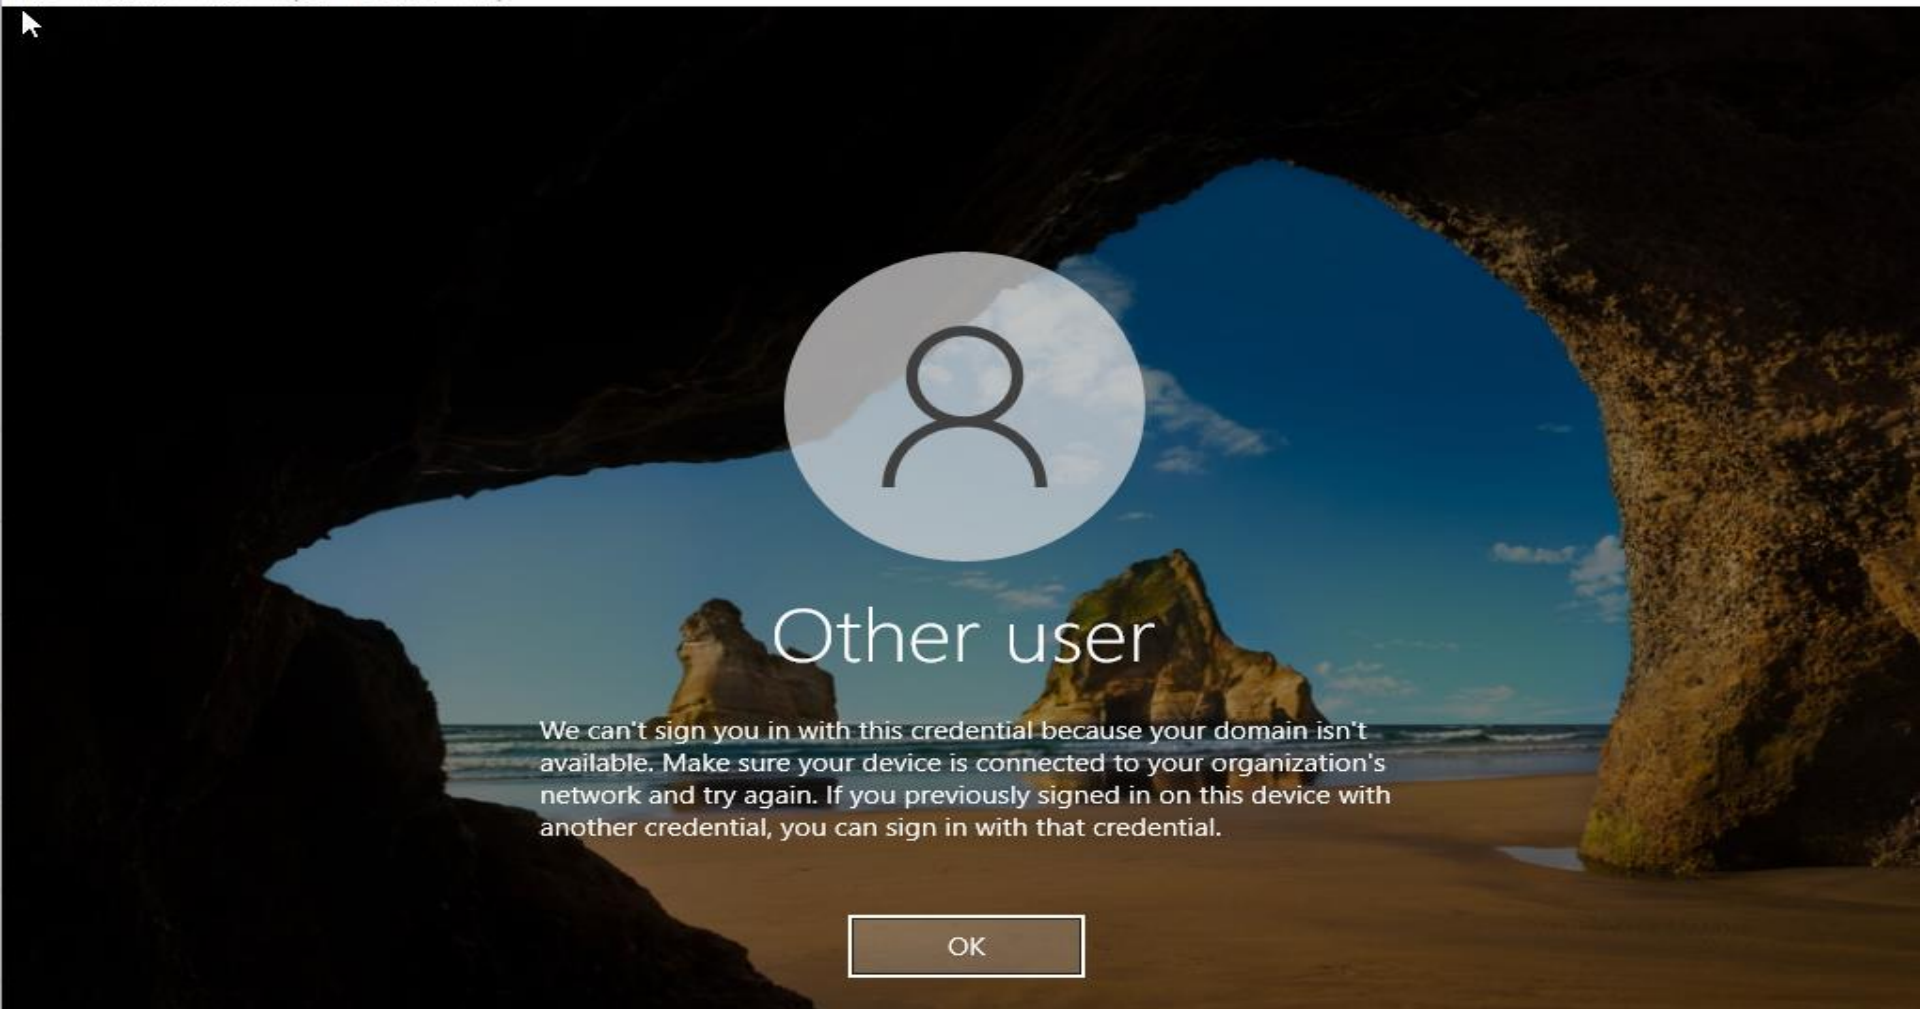

Domain User Logon Attempt With No Domain Controller Available

- For the next step in this project, shutdown **all** VMs in the `savn.local` domain that are currently running.
- Note that only an administrator has the permissions to power off a server. Thus, if you are currently logged to any system in the `savn.local` domain as either `domainUser01` or `localuser01` you cannot do this, you will have to log back in as the administrator)
- Start MJL-SP22-S22-2 running and attempt to log into the `savn.local` domain as `domainUser01`.
- The attempt to log in to MJL-SP22-S22-2 as `domainUser01` will fail since the domain controller MJL-SP22-S22-1 is off-line. You should see a screen similar to the one shown on page 41.

Take a screenshot of this page. Label it: "SS7 - Attempted domain login when domain server is unavailable." Note that the exact message you get here might vary, however, the point is that the login process will fail. SEE NEXT PAGE!

IMPORTANT!!!

- After failing to log on with the domain controller offline, **do not force stop MJL-SP22-S22-2.**
- Instead, restart MJL-SP22-S22-1 (the domain controller) and once it has restarted, do a proper login on MJL-SP22-S22-2 (as an Administrator) and go through the normal proper shutdown procedures for each VM.
- **DO NOT FORCE STOP MJL-SP22-S22-2!**
